

DRB Consulting - Personalized information technology services from a local professional with over 10 years of experience. Services include, but are not limited to, the following:

Domain name registration and hosting

A cost-effective one-stop shop for your internet needs by utilizing a variety of sources. Often includes multiple email accounts and customer support through the provider. Maintenance can be left to you or sourced through DRB Consulting.

E-Commerce

Using a variety of sources, your e-commerce project will be handled from inception to completion in a cost-effective manner. There are many avenues to explore regarding sign-off of such projects and the ultimate responsibility of the transactions are yours, leaving the success of your e-commerce up to you and your marketing plan, with which DRB Consulting can also provide assistance, such as registering your e-commerce site with popular internet-based search engines and more.

Internet Security

Your web site and/or e-commerce site need to be secure in order to minimize downtime due to attacks from hackers and viruses. A secure site also gives your customers a sense of confidence when purchasing your products and services. DRB Consulting can analyze your existing means, recommend a course of action to improve existing security, or plan your security measures from start-up. Various tools and reporting are used in the analysis and then results are divided by costs to comprise packages, including software, licensing, hardware, etc.

Home & Small Business Networking

Whether you simply desire to network several PCs together in your home or a dozen PCs and servers in your office, DRB Consulting can

provide the guidance and hands-on service necessary to ensure you're up and running in good time, with security to go with it. Services can include as many facets of networking as your budget allows, from needs analysis, budgeting, hardware/software procurement, installation, security, back-ups, etc.

Needs Analysis & Procurement

If you're unsure what it takes to upgrade your existing network, or you want to start a network from scratch, DRB Consulting can provide the guidance necessary to help you make the right decisions based on your budget and goals.

Off-Site Data Storage

If your small business doesn't take advantage of the added security that off-site storage provides, you're not playing it safe with your critical and sensitive data. Off-site data storage protects you from fire, theft, flood, and other unforeseen disasters and circumstances, and is usually very cost-effective depending on the amount of data and type of media used.

PC & Server Support

If you run a small business and use present personnel, such as engineering staff, to take care of the day-to-day technical issues surrounding networks, you may be wasting valuable payroll dollars. By paying specialized staff to perform tasks not related to their formal training, you are diverting funds to less productive means. It may be time to outsource some of the major duties such as PC and Server support in order to allow your staff to focus on their work. You might be surprised how affordable day-to-day support can be.

PC Forensics

If you suspect you have an employee who is using business tools, such as computers, for something other than work, you can legally call in an expert to gather evidence which may be used at your discretion towards an appropriate course of action.

Project Management

So you know what you want to accomplish, but you just don't know how to go about it. You have a budget, you have personnel, you have an idea. Now you need somebody to put all the pieces of the puzzle together and accomplish that goal in a timely and cost-effective manner. That's where DRB Consulting comes in. By utilizing over ten years of experience in many facets of the IT industry, you can rest assured you're getting proper management of your projects.

Software Quality Assurance & Testing

Acting as an independent source for quality assurance and testing allows DRB Consulting to provide unbiased results with regard to your software products integrity. Using various methods and tools, you will receive time-sensitive analysis, documentation, and reporting which outlines the method used and all aspects of problems or "bugs" found during testing. This work can be performed in-house or in an independent lab.

Technical Writing

From basic sales and marketing brochures (such as this one you're reading now) to intricate user manuals, DRB Consulting can do it all. Whether it's for hard-copy (that which needs to be printed), web-based (such as online user manuals or help tools), or for audit / production purposes, no job is too big or small. Technical writing encompasses many facets of business and technology, such as:

- Company profiles
- Corporate newsletters
- Public news articles
- Press releases
- Hardware instruction manuals
- Software instruction manuals
- Consumer electronics user manuals
- Employee manuals
- Employee training materials
- Material Safety Data Sheets (MSDS)
- Much, much more!

Training

In-house or off-site IT training can be provided by DRB Consulting, depending on the subject and tools required. Training can range from basic PC use to that of specific software/hardware tools required by your company for your employees to perform their duties with proficiency and accuracy. DRB Consulting can even learn your tools and convey meaningful instruction to a larger audience in a classroom setting. Instruction can also include any of DRB Consulting's other services.

Web Site Development

In today's growing and dynamic market, sales has become increasingly technology driven, and having a presence on the world-wide-web should be considered by any business, no matter what their nature. A web site can be as simple as an informative page about your company to a series of well-organized pages linking all aspects of your company's products & services together. Even e-commerce can be regarded as the upper echelon of web development. By using complex tools and programming, your customers and web surfers alike will enjoy an interactive nature and a rewarding learning experience. Even learning tools such as knowledge (data)bases can be constructed to utilize the power of web browsers. Whether across the internet or an in house intranet, DRB Consulting can handle any or all of your web site development needs, including maintenance such as performing updates and back-ups after sign-off.
